전문 한글 출판물, '마르댕 있음 희미한 침략'의 일부 문장.

" shouting was clearly audible from the radiator, and the sound echoed throughout the building."

활용한 예시: "shouting"의 의미는 '호소하는 소리'를 나타내며, 문장에서 '호소하는 소리'가 들려오는지 확인할 수 있다. 따라서 이 문장은 '호소하는 소리'가 들려오는 상황을 나타내는 문장이다.

또한, "shouting"은 '호소하는 소리'를 나타내며, 문장에서 '호소하는 소리'가 들려오는지 확인할 수 있다. 따라서 이 문장은 '호소하는 소리'가 들려오는 상황을 나타내는 문장이다.
Our working memories and long-term memories are both essential for our cognitive processes. Working memory plays a crucial role in our ability to hold and manipulate information temporarily, while long-term memory stores information for extended periods.

In this chapter, we will explore the mechanisms and functions of both working and long-term memories, and how they interact to support our daily cognitive tasks.

سان ליט:

1. The phonological representation of a word is determined by the way it is pronounced. Phonological representations are often abstracted from surface forms for phonetic reasons.

2. The phonological system of a language consists of a set of rules that govern the production of sounds. These rules are based on the sounds that are actually produced in the speech production process.

3. The phonological representation of a word is often different from its surface form, especially in cases where the word is pronounced with stress changes or other phonetic features.

4. Phonological representations are often used in computational linguistics to model the relationship between the surface form of a word and its meaning. This is important for tasks such as machine translation and speech recognition.

5. The phonological system of a language is often studied using the techniques of phonology, which is a branch of linguistics that deals with the nature and structure of language.

6. The phonological system of a language is often characterized by the presence of certain phonetic features, such as vowels, consonants, and stress patterns.

7. The phonological system of a language is often studied using the techniques of phonology, which is a branch of linguistics that deals with the nature and structure of language.

8. The phonological system of a language is often characterized by the presence of certain phonetic features, such as vowels, consonants, and stress patterns.

9. The phonological system of a language is often studied using the techniques of phonology, which is a branch of linguistics that deals with the nature and structure of language.

10. The phonological system of a language is often characterized by the presence of certain phonetic features, such as vowels, consonants, and stress patterns.
